🧪 Low-Code Chatbot Deployment Exercise (120 Minutes)

🎯 Objective

Build and deploy a **functional chatbot** using a low-code platform and host it on a **static website**.

You must:

- Design a chatbot flow
- Build it using a platform
- Embed it into a static webpage
- Deploy it live

📌 🧩 Choose Your Project (Pick ONLY ONE)

Select **one** of the following:

1. 🛒 Mini E-commerce Product Guide Bot
2. 💬 Customer Support Bot for a SaaS Product
3. 🚚 Local Delivery Service Inquiry Bot
4. 💼 Job Application Pre-Screening Bot
5. 🏡 Rental Property Inquiry Bot

⏱️ Time Limit: 120 Minutes

Task	Time
Planning chatbot flow	20 mins
Building chatbot	40 mins

Creating static page	20 mins
Deployment	20 mins
Testing & polish	20 mins

🧠 Suggested Chatbot Flows (Per Project)

1. 🛒 Mini E-commerce Product Guide Bot

Flow:

- Welcome → Ask category (Shoes / Phones / Laptops)
- Ask budget range
- Suggest 2–3 products (static)
- Ask:
  - View details
  - Buy now (redirect link)
- Collect email (optional)

---

2. 💬 SaaS Customer Support Bot

Flow:

- Welcome → “How can I help?”
  - Pricing
  - Features
  - Technical Issue
- If issue:
  - Ask description
  - Provide predefined solutions
  - Offer contact form

---

3. 🚚 Local Delivery Service Bot

Flow:

- Ask pickup location
- Ask delivery location
- Show estimated price
- Ask package type
- Collect contact details

---

4. 💼 Job Pre-Screening Bot

Flow:

- Ask name
- Ask role applying for
- Ask experience (0–1, 2–5, 5+)
- Ask key skill question
- Save responses
- Show “We’ll contact you”

---

5. 🏡 Rental Property Bot

Flow:

- Ask location preference
- Ask budget
- Ask property type (1BHK, 2BHK, etc.)
- Show listing options
- Ask to schedule visit

⭐ Optional Feature: Knowledge Base (Advanced)

What is it?

A **knowledge base** allows the bot to answer open-ended questions automatically.

How to Add (General Steps)

Most platforms like Tidio, Crisp, or Botpress support this:

Steps:

1. Go to **AI / Knowledge Base section**
2. Add:
    - FAQs
    - Website URL OR
    - Manual Q&A pairs
3. Train or publish
4. Connect it to fallback response:
    - “I didn’t understand → check KB”

🛠️ Chatbot Platforms You Can Use

You may use any of the following:

- Landbot
- Whotnot
- Tidio
- Crisp
- Botpress
- ManyChat

🌐 Static Website Deployment Platforms

Use any of these:

- Vercel
- GitHub Pages
- Netlify
- Cloudflare Pages
- Firebase Hosting

🧪 Walkthrough (Using a NEW Platform: Tidio)

🔧 Step 1: Create Chatbot in Tidio

1. Sign up on Tidio
2. Go to **Flows / Chatbots**
3. Click **Create New Bot**
4. Add blocks:
    - Message block
    - Question block
    - Button choices
5. Build flow (based on your selected project)
6. Save & Publish

🧠 Add Knowledge Base in Tidio (Optional)

1. Go to **Lyro AI / Knowledge**
2. Add FAQs manually
3. Enable auto-replies
4. Connect fallback message to AI

🔗 Step 2: Get Embed Code

1. Go to **Settings** → **Channels** → **Live Chat**
2. Copy JavaScript embed code

💻 Step 3: Create Static Web Page

Create `index.html`:

```
<!DOCTYPE html>
<html>
<head>
```

```
 <title>My Chatbot</title>
</head>
<body>
 <h1>Welcome to My Chatbot Demo</h1>

 <!-- Paste chatbot script here -->
 <script src="YOUR_SCRIPT_HERE"></script>

</body>
</html>
```

🚀 Step 4: Deploy (Using Netlify)

1. Go to Netlify
2. Drag & drop your project folder
3. Get live URL instantly

✅ Expected Final Output

Your final result should include:

🌍 Live Website

- Hosted URL (e.g., Netlify/Vercel link)

💬 Working Chatbot

- Opens on website
- Interactive conversation
- Buttons / inputs working

🧠 Logic

- Clear flow (no dead ends)
- At least 5–7 steps

⭐ Bonus (Optional)

- Knowledge base working

- Email capture / form
- Clean UI

🧪 Example Final Experience

When a user opens your site:

- Sees a simple page
- Chatbot pops up or is embedded
- User interacts smoothly
- Gets meaningful responses

🏁 Submission Requirements

Submit:

- ✅ Live link
- ✅ Platform used
- ✅ Short description of bot
- ✅ Screenshot
